

Production Architecture

1. We can use Jira as project management tool (sprint planning, task defining)
2. Can use as Git lab as a version control.
3. And also here have 3 stages before production deploy. Development / Testing and stage testing
4. After feature or Bug development their have 4 stages to full fill as pipeline to complete.
5. And also we can integrate automated code review tools for this.
6. Last ly we can use Azure dev ops for all these design as one place
